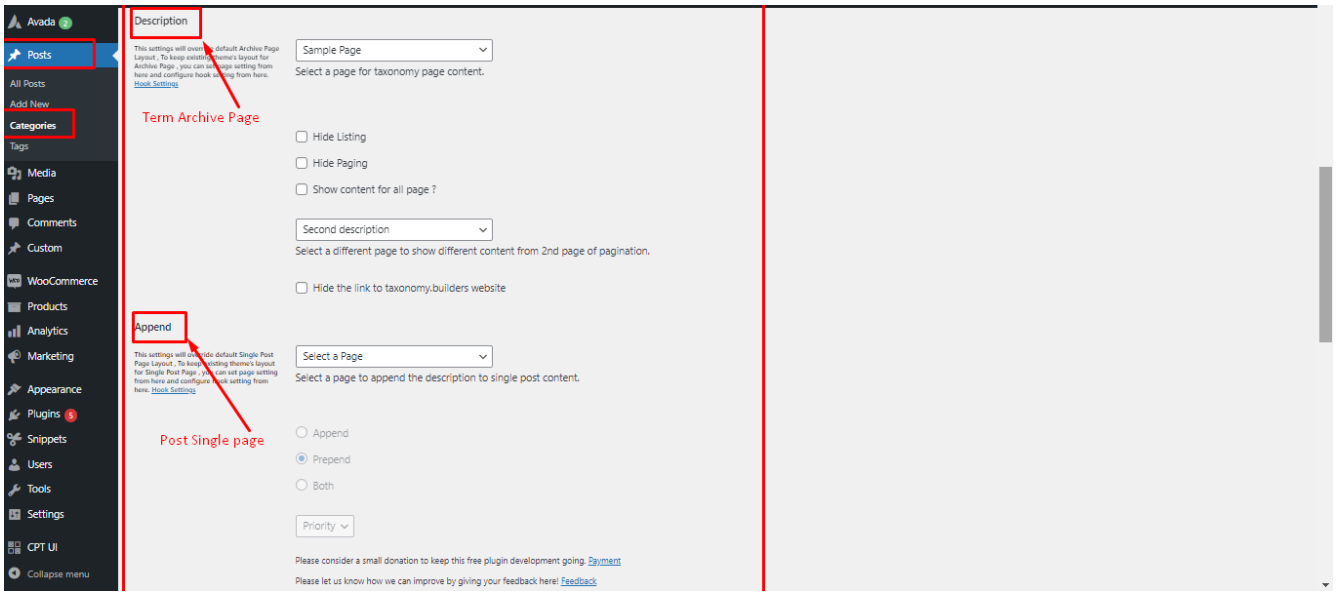
Build Taxonomy Plugin Description and Screenshots

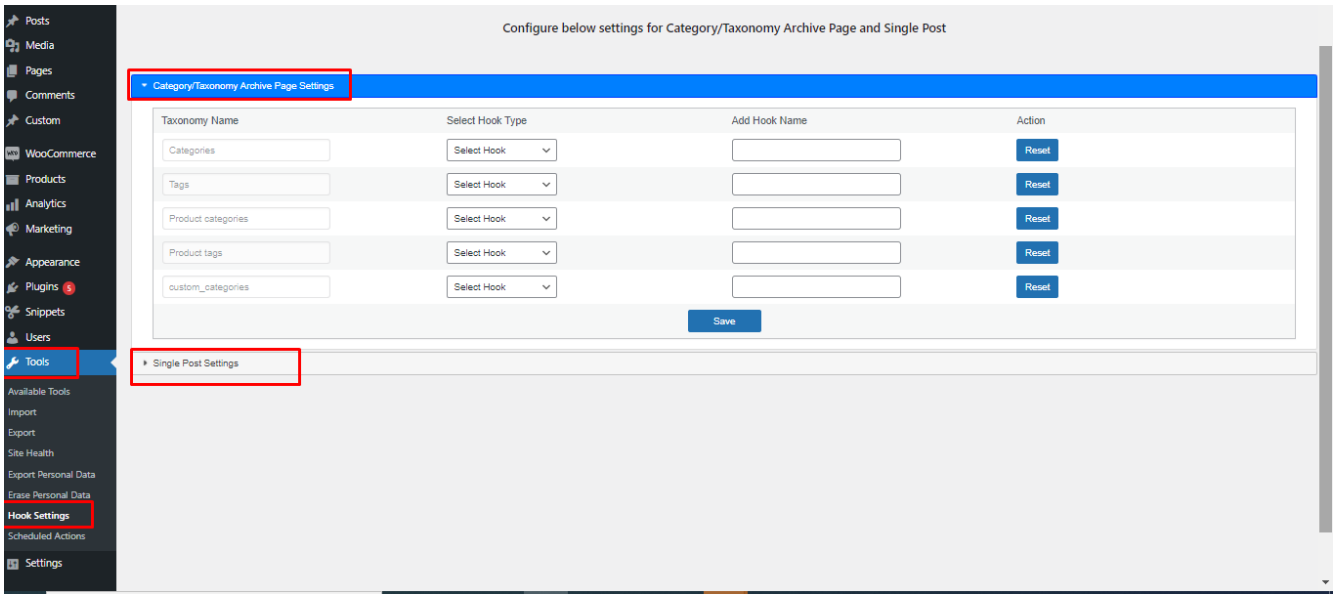
This plugin is come up with 2 types of settings

1) Taxonomy term setting



- ⇨ Here **"Description"** setting will work for **Term Archive Page.**
- ⇨ And **"Append"** setting will work for **Post Single Page.**

2) Hook Setting



⇨ Hook setting also have 2 different section for **Term Archive Page** and **Post Single Page**.

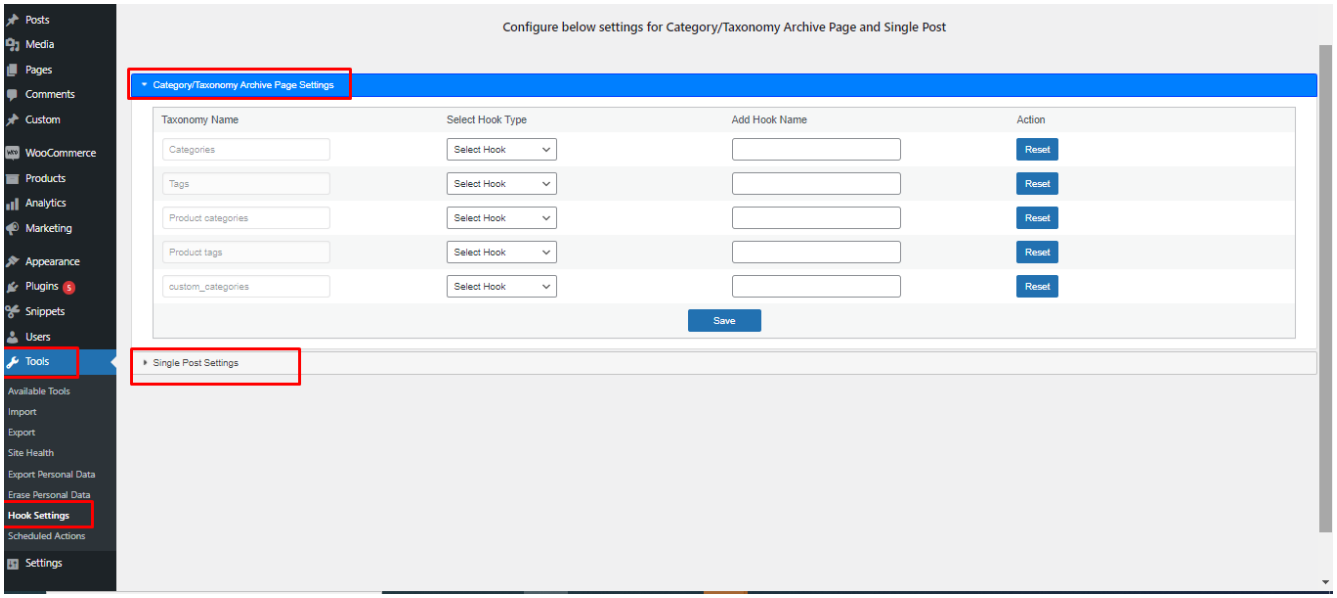
********** Notes **********

⇨ If you **have configured Hook Setting** for Term Archive Page or Post Single Page , then it **will NOT** override any term archive or single page , it will display exact same layout of active theme.

⇨ If you have **NOT configured Hook Setting** for Term Archive Page or Post Single Page , then it **will** override theme's term archive page , and it will display data as per Archive setting like : Hide Listing , Hide Paging etc… and as per Single setting like : Prepend, Append, both etc …

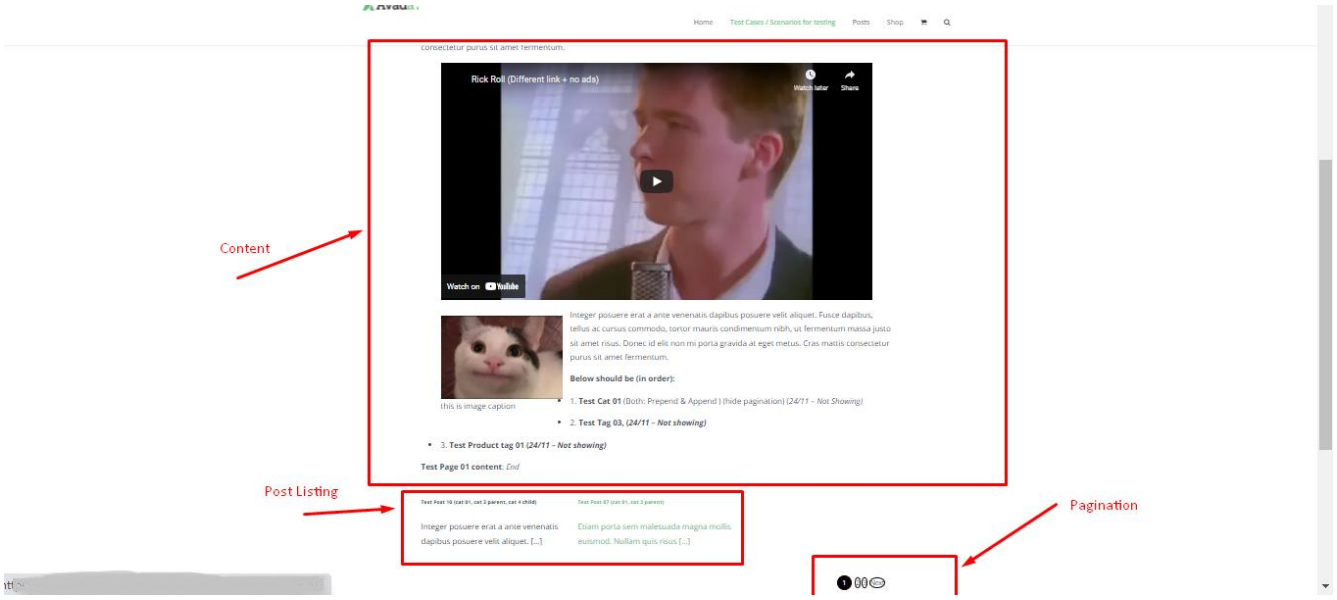
“Description Settings” for custom/default Category/Taxonomy

- ⇨ As shown in the screenshot description_img 1.1 , These settings are enable for any custom/default category/taxonomy and tag edit page.
- ⇨ This setting will work for term archive page in front-end.



description_img 1.1

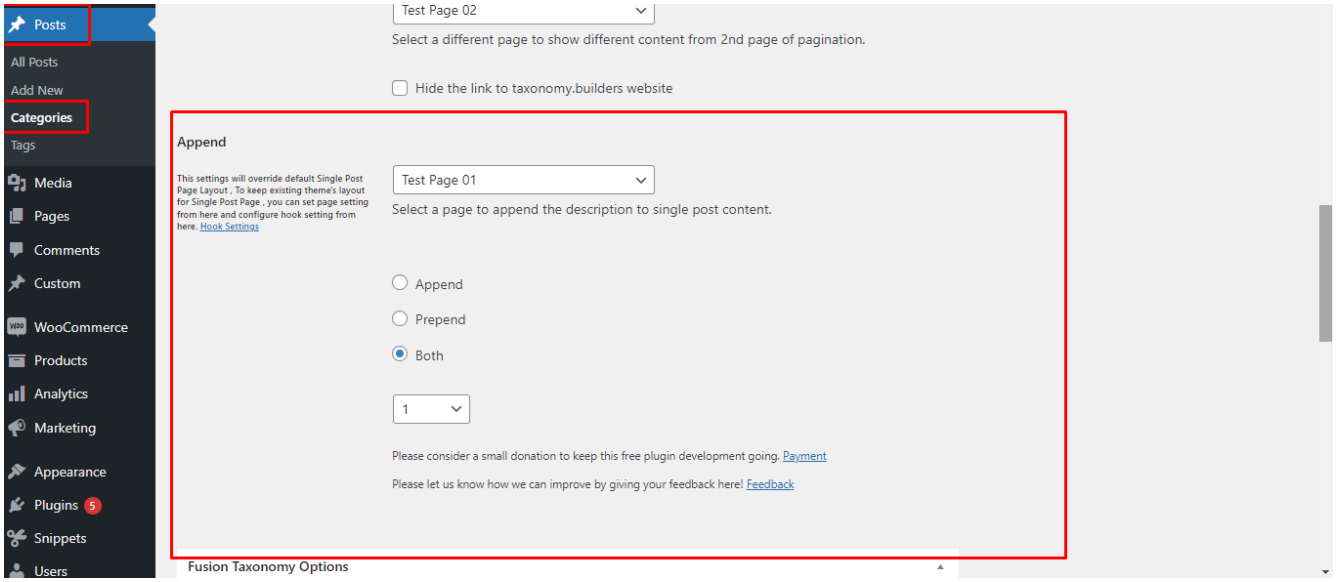
- ⇨ As per settings in the screenshot description_img 1.1 , term archive page will override and content will be displayed as shown in the screenshot description_img 1.2.



description_img 1.2

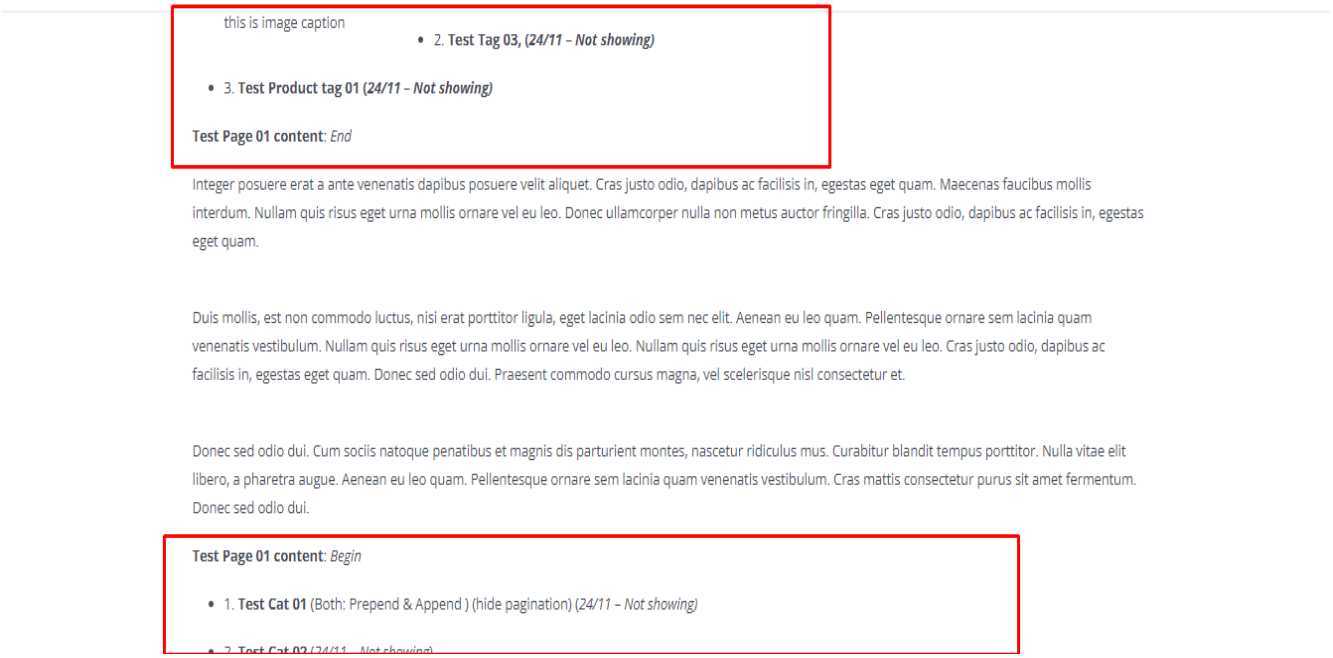
“Append Settings” for Single Post

- ⇨ As shown in the screenshot append_img 1.3, These settings are enable for any custom/default category/taxonomy and tag edit page.
- ⇨ This setting will work for single post page in front-end.



append_img 1.3

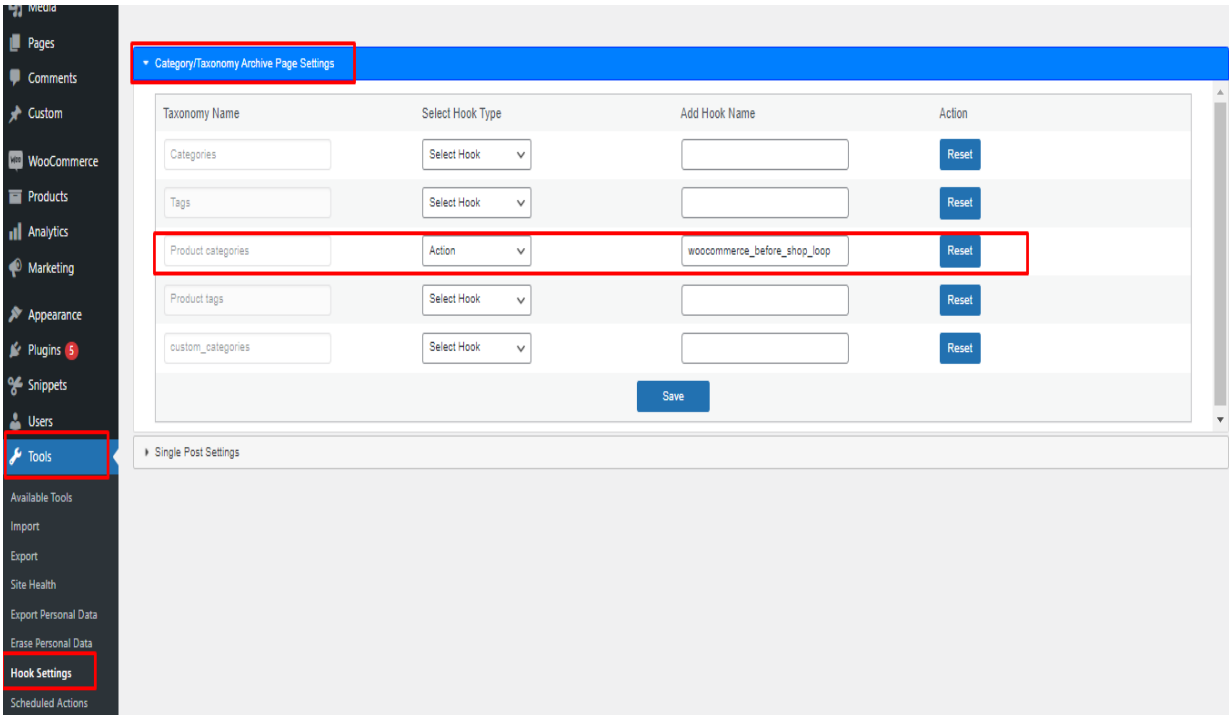
- ⇨ As per settings in the screenshot append_img 1.3 , single post page will display the content as shown in the screenshot append_img 1.4.



append_img 1.4

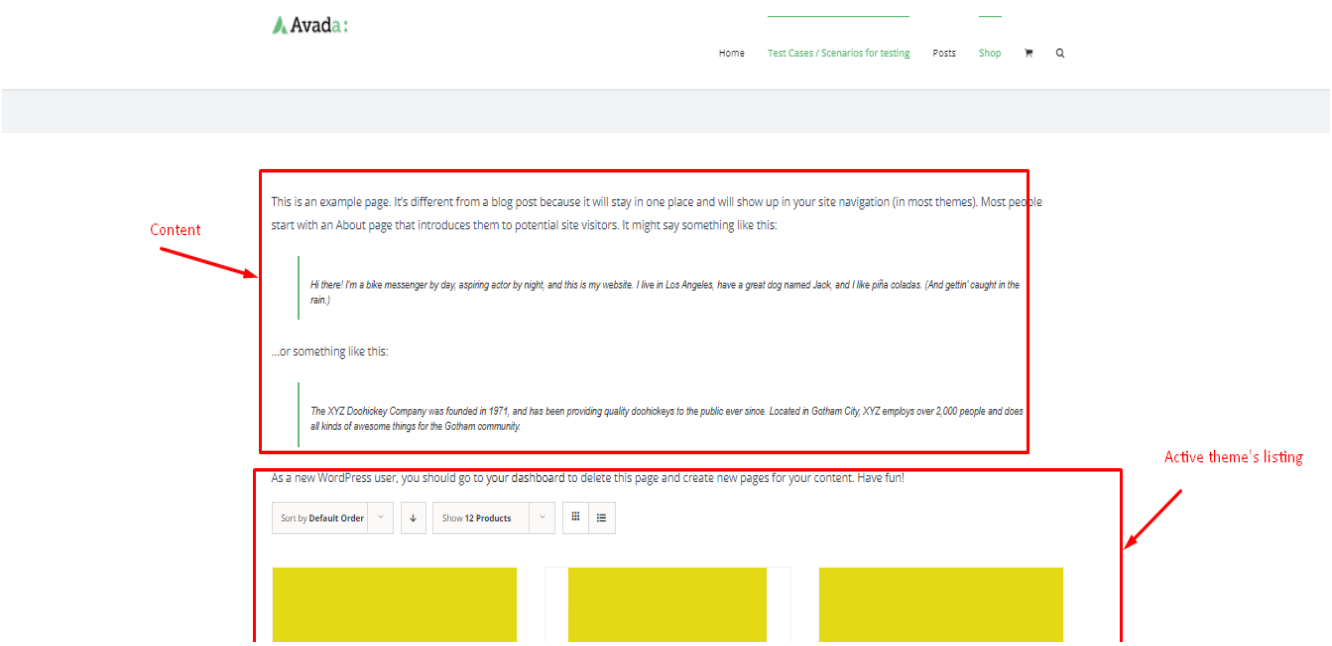
“Hook Settings” for Archive Page

- ⇨ As shown in the screenshot hook_img 1.5, if you have configure setting from here , then it will NOT override current active theme layout for term archive page.



hook_img 1.5

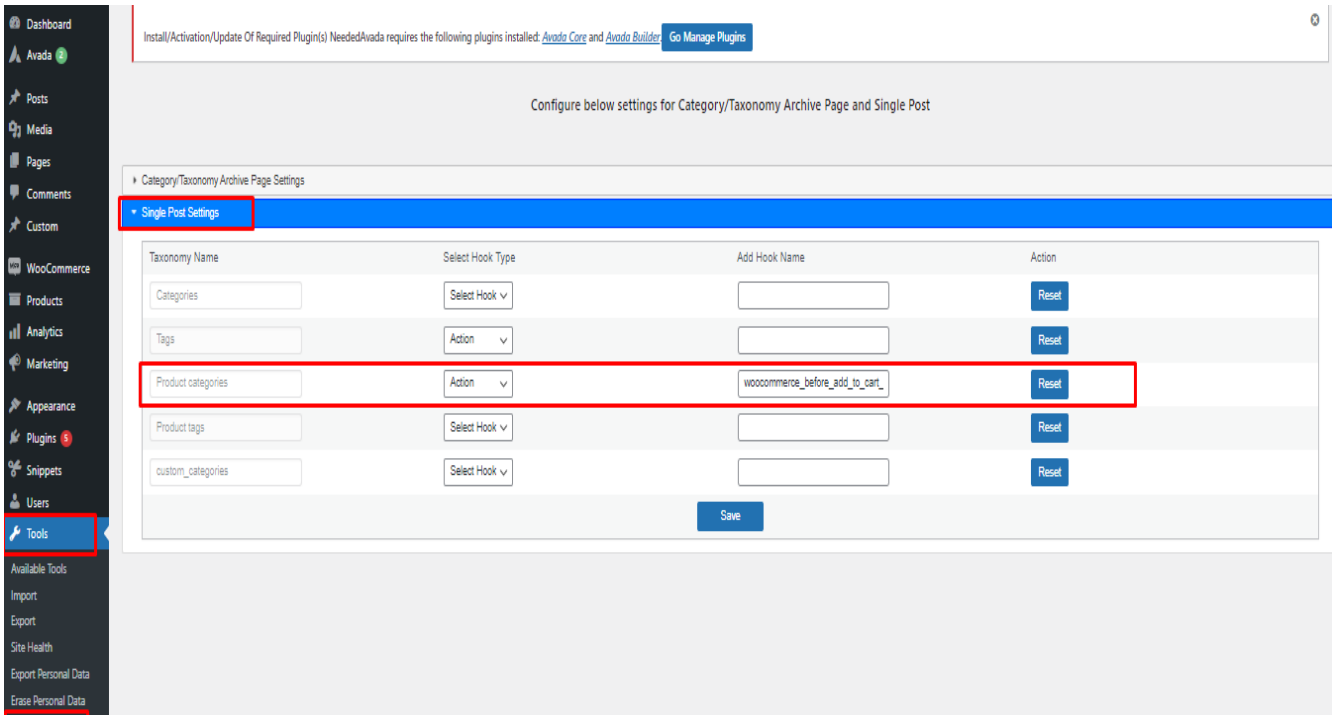
- ⇨ As shown in the screenshot hook_img 1.5 , It will display content at particular place.
  eg : It will display content at “woocommerce_before_shop_loop” hook as shown in the screenshot hook_img 1.6



hook_img 1.6

Hook Settings” for Single Page

- ⇨ As shown in the screenshot hook_img 1.7, if you have configure setting from here , then it will NOT override current active theme layout for single page.



hook_img 1.7

- ⇨ As shown in the screenshot hook_img 1.7 , It will display content at particular place.
  eg : It will display content at “woocommerce_before_add_to_cart_button” hook as shown in the screenshot hook_img 1.8.
